

“A Million Mud Balls for Mother Earth”

In Panang Bay, Malaysia, volunteers kick-started a successful effort that restored ecology of their ocean bay within 3 yrs called “A Million Mud Balls for Mother Earth”. We are teaching & testing EM-1 mud balls to reclaim our vital waterways in NYC. Tried & true for 20 years, now a global movement – let’s be a part of this clean water evolution together.

These balls work with other bio-remediation tools such as seedballs and mud balls, moss paint & mollusk shells. It’s part of “The Harbor Phyto, Myco, Micro, Moss & Mollusk Initiative”. “The Hpmmmm (the p is silent)”, educational estuary workshops.

Donations are appreciated for the citizen science activities. Help us embed these world famous restorative mudballs in classes, colleges & community organizations.

It takes a village.

BENEFICIAL MUD BALLS

RECIPE

Ingredients:

DIRT

BOKASHI*

ACTIVATED EM*

MOLASSES

150 mudballs

19 QRTS + 3.5 CUPS

5 QUARTS

6 CUPS

6 FL OZ.

Directions:

1. In a mixing tub add bokashi to dirt.
2. In separate container add molasses to Activated EM
3. Pour liquid mix onto the dry mix & mix well.
4. Make mud balls: a bit smaller than a baseball.
 - If too dry, add water, if too wet, add dirt.
 - Let mudballs ferment in ventilated crates for 2 weeks.

Application: Target at least 1 mud ball per square meter at the bottom of a polluted water body.
